Introduction

unshare

pid mount network

chroot alpine

ip

veth

alpine chroot alpine

proc veth

Prior Work/Novelty

<u>lxc</u> switching to their

<u>own proprietary system</u>, <u>libcontainer</u> lxc

man

<u>unshare</u> <u>lxc-unshare</u>

unshare lxc

(2020) lxc docker

lxd lxc lxc lxd

Technical Outline

container.c clone

fork

clone

CLONE_NEWPID CLONE_NEWNS CLONE_NEWNET

setup_sysimg alpine

dd create_container

chroot proc

veth

UP execvp

veth fork execvp

veth

sleep

make ccontainer Makefile ccontainer

sudo

-D BENCHMARK make bench Makefile

bench

Key Metrics/Benchmarking

ip

This article

1. Image Pull Performance alpine

2. Startup Time

- 3. Networking Performance
- 4. Disk I/O Performance
- 5. Resource Utilization (Memory and CPU)

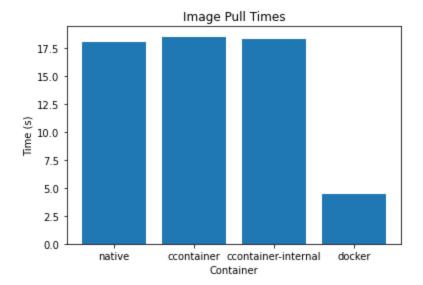

Image Pull Performance

time

alpine

cd

ccontainer

ccontainer

ccontainer fork

\dev\zero

time

ccontainer

time bench

imgpull.sh

ccontainer

build

docker_imgpull.txt

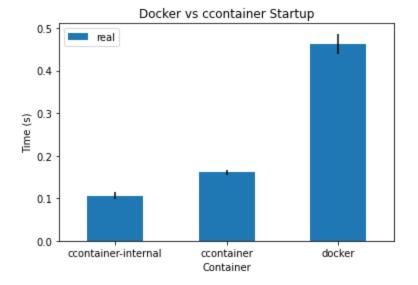

time

curl tar

Startup Time

time
